### **Stinger Quad AER Seed Box Adjustment**

***There are three points of adjustment  
when a seed gate is making contact with the seed box.***

1. On each side of the unit loosen the three nuts outlined in red, the 2 nuts outlined blue and the two nuts outlined in green.
2. Occasionally the seed chute sticks on a bolt head and can be push down and back slightly. Retighten the green bolts on both sides once the chute is all the way back and down.
3. Push down on the box support brackets. Once they have bottomed out tighten the nuts outlined in blue (both sides).
4. Finally lift up on the seedbox and tighten the nuts outlined in red. There is a small amount of play in the seedbox and supports that when utilized can provide ***additional clearance for the seedgate.***
